

Flexi-Pave of Central Florida, LLC

What happened to yesterday's passenger car tires?

They became a new walkway for The Mustard Seed of Central Florida!

PROBLEM

Flexi-pave™ contains properties that no other general material or paving system possesses. It greatly enhances a multitude of paving and other construction challenges in commercial, industrial and residential arenas.

SOLUTION!

The flexibility of Flexi-pave™ gives it enormous resistance to sub surface movement that would normally cause trip hazards and separation - ultimately causing costly repairs and not forgetting liabilities. With its porous properties a reduction in retention for storm water run off gives greater value in the building design and size.

About the Company

Flexi-Pave™ was developed and is manufactured by KB Industries, Inc. KBI has almost two decades of experience in the resilient surfacing industry, and has pioneered the use of recycled rubber into an exceptionally durable and unique material to be used in a wide variety of applications!

KBI's mission is to utilize high volumes of waste tires by designing and engineering innovative products and solutions for municipal, industrial, commercial and residential applications.

The company's goal is to use the ingenuity of Flexi-Pave™ to eliminate the disposal of tires in global landfills and incinerators while enhancing the natural cleansing flow of water through the earth
